

Keynote Speaker Abstract

Towards a Safe System – a Glimpse into the Future

Corben, B.

Monash University Accident Research Centre (MUARC)

While much has been achieved over the past decade in translating Safe System principles into practice, major challenges remain to be tackled and practical solutions devised. Accelerating the implementation across Australia's road network of currently known and envisaged Safe System solutions shapes as a critical priority. This presentation will highlight some innovative treatments, both current and under development, that can help transform our road system into a much safer one while maintaining an appropriate level of personal mobility. Critical to our future rate of progress will be how we choose to move from the current state towards the Safe System of the future. While there is no one path, new routes for moving towards the Safe System will be aired for the purposes of discussion and debate.
